Letter of Support

Dear Sirs,

Some of the products Ericsson Radio Systems develop are hard-real-time systems with complex, heterogeneous structures and components. The demands for high quality, low cost, and short time to market put high requirements on our development processes for these systems.

We have studied the PAMP/ARTES project proposal for "Design of Heterogeneous Multiprocessor Systems for Real-Time Applications" and found that it addresses interesting issues. Consequently, we support the project application by Prof. Peng and Dr. Eles at the Embedded Systems Laboratory at Linköping University.

Peter Olanders,
Manager
Radio Technology Research
Ericsson Radio Systems
